RE: Upper Deschutes Resource Management Draft.
Public Comment Process

As a concerned Central Oregon resident I would like to be on record as supportive of 'Current Range Vegetation Management'. The preferred alternative B.L.M. is proposing utilizes a newly formulated technique called 'Historic Range'. I support 'Current Range' over 'Historic Range' for several reasons.

1. Current range is the B.L.M.'s present method of vegetation management.
 - a. It is the best approach because of it's built in flexibility.
 - b. Current range isn't restricted like historic range to a concept of trying to recreate the uncertainties of the past.
 - c. The concept of recreating vegetation conditions that existed 150 years ago and before is impossible and isn't very beneficial to the community at large.
 - d. Current range is the most compatible and consistent with other current land-use activities like agriculture, multiple use and recreation.
 - e. Current range works the best with our current and future vegetative conditions.
 - f. Current range has the best chance of creating a healthy and diversified ecosystem that prioritizes our current needs and vegetative concerns.
 - g. The B. L. M.. is managing public lands within a federally designated reclamation project area. The land within this reclamation area is mostly privately owned. This project area is meant for human development and occupancy. That is another key reason I support current range, it accommodates people and their actions the best. It works better under change, the types of changes that will occur now and in the future.
2. Historic range vegetation management is a new and uncertain concept I do not support.
 - a. I do not support the B.L.M..'s efforts to re-create the vegetation uncertainties of the past.
 - b. How do I know if historic range is the best choice when it's never been used before?
 - c. Historic range will be more expensive to implement and more law enforcement will be necessary.
 - d. Those greater expenses cannot be justified by results that are unclear and uncertain.
 - e. Historic range reduces public access, has built-in conflicts with multiple use. and de-emphasizes agricultural use.

Please amend the preferred alternative to support:

'Current Range Vegetation Management'.

RE: Upper Deschutes Resource Management Draft.
Public Comment Process

As a concerned Central Oregon resident I would like to be on record as supportive of 'Current Range Vegetation Management'. The preferred alternative B.L.M. is proposing utilizes a newly formulated technique called 'Historic Range'. I support 'Current Range' over 'Historic Range' for several reasons.

1. Current range is the B.L.M.'s present method of vegetation management.
 - a. It is the best approach because of it's built in flexibility.
 - b. Current range isn't restricted like historic range to a concept of trying to recreate the uncertainties of the past.
 - c. The concept of recreating vegetation conditions that existed 150 years ago and before is impossible and isn't very beneficial to the community at large.
 - d. Current range is the most compatible and consistent with other current land-use activities like agriculture, multiple use and recreation.
 - e. Current range works the best with our current and future vegetative conditions.
 - f. Current range has the best chance of creating a healthy and diversified ecosystem that prioritizes our current needs and vegetative concerns.
 - g. The B. L. M.. is managing public lands within a federally designated reclamation project area. The land within this reclamation area is mostly privately owned. This project area is meant for human development and occupancy. That is another key reason I support current range, it accommodates people and their actions the best. It works better under change, the types of changes that will occur now and in the future.

2. Historic range vegetation management is a new and uncertain concept I do not support.
 - a. I do not support the B.L.M.'s efforts to re-create the vegetation uncertainties of the past.
 - b. How do I know if historic range is the best choice when it's never been used before?
 - c. Historic range will be more expensive to implement and more law enforcement will be necessary.
 - d. Those greater expenses cannot be justified by results that are unclear and uncertain.
 - e. Historic range reduces public access, has built-in conflicts with multiple use, and de-emphasizes agricultural use.

Please amend the preferred alternative to support:

'Current Range Vegetation Management'.

Public Comment Process

As a concerned Central Oregon resident I would like to be on record as supportive of 'Current Range Vegetation Management'. The preferred alternative B.L.M. is proposing utilizes a newly formulated technique called 'Historic Range'. I support 'Current Range' over 'Historic Range' for several reasons.

1. Current range is the B.L.M.'s present method of vegetation management.
 - a. It is the best approach because of it's built in flexibility.
 - b. Current range isn't restricted like historic range to a concept of trying to recreate the uncertainties of the past.
 - c. The concept of recreating vegetation conditions that existed 150 years ago and before is impossible and isn't very beneficial to the community at large.
 - d. Current range is the most compatible and consistent with other current land-use activities like agriculture, multiple use and recreation.
 - e. Current range works the best with our current and future vegetative conditions.
 - f. Current range has the best chance of creating a healthy and diversified ecosystem that prioritizes our current needs and vegetative concerns.
 - g. The B. L. M. is managing public lands within a federally designated reclamation project area. The land within this reclamation area is mostly privately owned. This project area is meant for human development and occupancy. That is another key reason I support current range, it accommodates people and their actions the best. It works better under change, the types of changes that will occur now and in the future.

2. Historic range vegetation management is a new and uncertain concept I do not support.
 - a. I do not support the B.L.M.'s efforts to re-create the vegetation uncertainties of the past.
 - b. How do I know if historic range is the best choice when it's never been used before?
 - c. Historic range will be more expensive to implement and more law enforcement will be necessary.
 - d. Those greater expenses cannot be justified by results that are unclear and uncertain.
 - e. Historic range reduces public access, has built-in conflicts with multiple use, and de-emphasizes agricultural use.

Please amend the preferred alternative to support:

Public Comment Process

As a concerned Central Oregon resident I would like to be on record as supportive of 'Current Range Vegetation Management'. The preferred alternative B.L.M. is proposing utilizes a newly formulated technique called 'Historic Range'. I support 'Current Range' over 'Historic Range' for several reasons.

1. Current range is the B.L.M.'s present method of vegetation management.
 - a. It is the best approach because of its built in flexibility.
 - b. Current range isn't restricted like historic range to a concept of trying to recreate the uncertainties of the past.
 - c. The concept of recreating vegetation conditions that existed 150 years ago and before is impossible and isn't very beneficial to the community at large.
 - d. Current range is the most compatible and consistent with other current land-use activities like agriculture, multiple use and recreation.
 - e. Current range works the best with our current and future vegetative conditions.
 - f. Current range has the best chance of creating a healthy and diversified ecosystem that prioritizes our current needs and vegetative concerns.
 - g. The B. L. M.. is managing public lands within a federally designated reclamation project area. The land within this reclamation area is mostly privately owned. This project area is meant for human development and occupancy. That is another key reason I support current range, it accommodates people and their actions the best. It works better under change, the types of changes that will occur now and in the future.

2. Historic range vegetation management is a new and uncertain concept I do not support.
 - a. I do not support the B.L.M.'s efforts to re-create the vegetation uncertainties of the past.
 - b. How do I know if historic range is the best choice when it's never been used before?
 - c. Historic range will be more expensive to implement and more law enforcement will be necessary.
 - d. Those greater expenses cannot be justified by results that are unclear and uncertain.
 - e. Historic range reduces public access, has built-in conflicts with multiple use. and de-emphasizes agricultural use.

Please amend the preferred alternative to support;

'Current Range Vegetation Management'.
