

Upper Siletz Watershed

Vegetation

Map No. 6

Legend

NOTE: Vegetation typing was based on 1993 SPOT and LandSat imagery and updated with 1995 aerial photography to reflect recent harvest activity. Areas typed as "Recent harvest" may be completely reforested at this time and areas classified as "Grass - plantation" and "Shrub - plantation" have been replanted but the small trees are not the dominant vegetation type. All of the conifer areas are dominated by an overstory of conifer vegetation but may have other vegetation types in their understory.
