LOG EXPORT AND SUBSTITUTION RESTRICTIONS: All timber offered for sale hereunder is restricted from export from the United States in the form of unprocessed timber and also prohibited from substitution of exported private timber.

CRUISE INFORMATION: The Douglas-fir, western hemlock and grand fir trees have been cruised using the 3P system to select sample trees. The sample trees were cruised and the volume expanded to a total sale volume. A map showing the location and description of these sample trees is available at this office. Trees designated for cutting which are considered to be non-merchantable were not recorded, they were typically marked to allow falling for safety reasons. Approximately 0% of the total sale volume is salvage material. With respect to merchantable trees of all species: - the average tree is 14 inches DBHOB; the average log contains 10 cu. ft.; the total gross volume is approximately 2661 CCF and 96% recovery is expected.

ECONOMY GRADE RECOVERY: Lumber recovery studies used in determining realization values indicate an approximate recovery of 7.65% economy grade from the total volume of Douglas-fir in this sale. This contract provision limits the liability of the Government to the actual costs incurred by the Purchaser which have not been amortized by timber removed from the contract area.

DURATION OF CONTRACT: Will be 24 months for cutting and removal of timber.

LOCATION: The sale area is located approximately two miles south of Lyons, Oregon. From Lyons, go south on State Highway 226 to the South McCully Mountain Road, Linn County.
